## Adding entire color palettes

### How to get the Jostens color palettes into your documents.

Someone asked, "How do we add all the Jostens Intense colors to our pages at one time?"

Here's how to do just that.

Click on the drop out menu on your color palette. Choose New Color Swatch. When the dialog box opens, click on the RGB button and then choose the Jostens palette you want to add.

When those colors show up in the window, hold down the shift key and select them all. Then click Add and they are all added to your document.

To easily add them to any other document create a small box of each color, group the boxes and add them to a library. Then with any document open, drag those boxes out of the library and into any file. All the colors will be automatically added to the swatches palette. Very cool!
